Your 7-Day Collagen Protocol

Ancient Ayurveda · Modern Science

Food with benefits. Real health benefits.

TMOLECULE.COM

Why this protocol works

Ayurveda discovered the molecule. Science measured it. We put it back into the daily ritual.

Most people who take collagen treat it like a vitamin — one scoop, one moment, one chance per day. The research suggests something different: **the supporting routine matters more than the dose alone**.

Four levers move the needle. This protocol orchestrates all four.

1
Cofactor

Vitamin C is required for the body to assemble collagen. A citrus or hibiscus pairing is non-negotiable.

2
Timing

Split the dose between morning (empty stomach) and evening (sleep window). Avoid coffee in the same window.

3
Pairing

Tea polyphenols and warming spices support circulation and absorption. The ritual is the routine.

4
Consistency

Skin endpoints in the studies appear at 8–12 weeks of daily use. 10g every day beats 20g three times a week.

> *Three thousand years of ritual. Ninety-one years of family tea. One protocol that brings them together.*

The Morning Ritual

Real caffeine, real spice, real cofactor — sustained, not jittery.

Spiced Chai · Collagen Blend

TEA BASE	Black tea (Assam or Darjeeling), 1 heaping tsp milled leaf or 1 tea bag
SPICES	Cardamom (2–3 pods crushed), cinnamon (1/4 tsp), ginger (1 thin slice fresh)
WATER	8–10 oz, just off the boil
STEEP	4–5 minutes, covered
ADD	**10g collagen peptides** + 1/4 lemon (or 1 tsp camu camu / acerola powder)
OPTIONAL	1 tsp ghee or coconut oil for sustained energy curve

Why this combination

- **Black tea** brings the L-theanine that smooths caffeine release — alert without the spike.
- **Cardamom and cinnamon** support digestive fire (agni) and have shown blood-sugar steadying effects.
- **Lemon** is the vitamin C cofactor that lets the collagen do its work.
- **Ginger** warms circulation — Ayurveda recommends it before noon, not after.

Tip: stir the collagen in last, after the brew has rested 60–90 seconds. It mixes more cleanly and the taste blends in.

The Evening Ritual

A second dose, a quieter cup — designed for the sleep window.

Rooibos · Rose Hip · Collagen

TEA BASE	Rooibos (caffeine-free), 1 heaping tsp
BOTANICALS	Rose hip (1 tsp dried) and a pinch of hibiscus for vitamin C
WATER	8–10 oz, freshly boiled
STEEP	5–7 minutes
ADD	**5g collagen peptides**, stirred in once the brew has cooled slightly
OPTIONAL	1 tsp raw honey (added off heat) for taste and a small glycine boost

Why this combination

- **Rooibos** contains aspalathin, an antioxidant that does not interfere with sleep.
- **Rose hip and hibiscus** are two of the most concentrated plant sources of vitamin C — your evening cofactor.
- **Honey + glycine pairing** may support deeper, more restorative sleep stages (anecdotal but well-loved).
- **The split dose** keeps blood amino acid levels topped up overnight, when growth hormone naturally pulses.

> *Tin by tin. Estate by estate. Cup by cup.*

The 7-Day Plan

One week. Two cups a day. Same time, every day.

DAY	MORNING RITUAL	EVENING RITUAL	NOTES
Mon	Spiced chai + 10g collagen + lemon	Rooibos + rose hip + 5g collagen	*Drink water before each cup*
Tue	Spiced chai + 10g collagen + lemon	Rooibos + rose hip + 5g collagen	*Note any energy shift*
Wed	Spiced chai + 10g collagen + lemon	Rooibos + rose hip + 5g collagen	*Skip coffee within 30 min*
Thu	Add 1/2 tsp turmeric + pinch black pepper	Rooibos + rose hip + 5g collagen	*Anti-inflammatory boost day*
Fri	Spiced chai + 10g collagen + lemon	Add 1 tsp ashwagandha to rooibos	*Stress support, end-of-week*
Sat	Spiced chai + 1 tsp ghee + 10g collagen	Rooibos + rose hip + 5g collagen	*Sustained energy variation*
Sun	Spiced chai + 10g collagen + lemon	Rooibos + honey + 5g collagen	*Reflect: how does the skin feel?*

The principle: the same backbone seven days running, with small variations to test what your body responds to. Keep the collagen dose constant (15g/day total) — that is the controlled variable.

What to add. What to avoid.

The small adjustments that move the score from a B to an A.

Add

- **A vitamin C source** with every dose — citrus, hibiscus, rose hip, camu camu, or a 250mg supplement.
- **A fat source** when pairing with curcumin or fat-soluble actives — ghee, coconut oil, full-fat milk.
- **Black pepper** any time turmeric is on the table — piperine multiplies curcumin bioavailability.
- **Sleep, sun, and protein.** Collagen is a building block — it cannot work in isolation.
- **One extra glass of water** per cup of tea — hydration carries everything.

Avoid

- **Coffee within 30 minutes** of your collagen dose — tannins bind protein.
- **Stirring collagen into a freshly boiled brew** — let it rest a minute. Better mix, better taste.
- **Sugar bombs.** Spiking insulin alongside collagen blunts the routine. Honey off-heat is fine.
- **Ginger after 6 PM.** Warming spices belong in the morning half.
- **Skipping days.** Two weeks of consistency beats four weeks of "when I remember."

A word on patience

The clinical studies that measured skin elasticity at 10g/day saw measurable change at **8 to 12 weeks**. Joint comfort endpoints take similar time. You are building, not patching.

Track 4 weeks. Print this page.

Check the box each time you complete the morning or evening ritual. Visible streaks beat invisible promises.

WK 4 PM							

What to expect

Week 1–2	The ritual settles in. Energy curve smooths. Digestion shifts subtly with the warming spices.
Week 4	Hair and nail changes are typically the first to appear — the keratin pathway turns over fastest.
Week 8–12	The skin endpoints from clinical research — elasticity, hydration — appear in this window.

Skip the guesswork. Get the chai built for this.

Spice Rush — milled-leaf chai designed to take a daily collagen scoop without making it taste like one.
